

## Project Title – Patient Dashboard

### 1. Introduction

- This Website contains all the necessary information that is necessary for maintaining patient's history, test reports and medical record. This website will be developed from patient's point of view.

### 2. Expected List of Features

- Patient Dashboard
- Medical History and Records
- Test Reports
- No of Visits | When | Why
- Appointments
- Reminder of Visits and Routine Tests
- Blogs about patient's disease

### 3. Market Survey and References

- <https://www.procon.co.nz/patient-dashboard.html>  
This website is well versed. It contains too much information of patient. It is possible that privacy of the patient is vulnerable.
- <http://info.clinicalconnect.ca/CC/healthcare/resource-centre-patient-dashboard>  
Same as above too much information is available in the website. Everything is cluttered. I suppose website should be simplistic yet delivers all the necessary information
